

Website Usability & Accessibility

Theme

The theme of my website is designed to be bright and unconventional from other websites as it has a pastel color scheme that is contrasted with a darker gray used for the labels and text on the site. I choose this theme because I believe it is nice and such different colors can still be used in a professional setting if it is done correctly in a subtle way.

Links via Images

The images used for this website are set up to bring the user to another website once they are clicked. The links associated with the images are the websites' respective logos and will bring the user to another site that will give them more detailed information on that certain topic. Of course, one will be able to access the new site and be able to explore more about what that website has to offer. In this case, all of the images on the website serve another purpose in addition to being a visual aid for the user.

Layout

This website uses a navigation bar at the top left to help direct the user to what they would like to see. The four different links at the top allows the user to click on the link and bring the user to a different page with new information. This helps to organize the website and make it easier for the user to move around the website. The "About Me" page is completely different from the other sections in regards to its layout because of all of the information that is provided. Having a white text box running down the middle that has a background filling in the rest of the space allows for a more direct and nice flowing view as the user scrolls through the text.
